INTERNATIONAL PRELIMINARY EXAMINATION REPORT

I. Basis of the report

 This report has been drawn on the basis of (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments.):

The amendments submitted in the letter of 3 November 2004 faxed on 4 November 2004 introduce substantive matter which, contrary to the requirements of PCT Article 34(2)(b), goes beyond the disclosure of the international application as filed. The amendments are as follows:

Claim 14 contains the additional feature

that the KI-based algorithm improves the combined

effect of the individual relationships in the

dynamic model.

The passage in the description on page 4, lines 6-14, which was cited by the applicant, discloses that the combined effect of these partial models for a system description are then improved by the KI-based algorithm during operation.

The fact that the combined effect of the individual <u>relationships</u> in the dynamic model is improved could not be found anywhere in the application.

Therefore, the content of claim 14 goes beyond the disclosure of the international application as filed and is not admissible.

Claim 14 will not be taken into account in the rest of the procedure (PCT Rule 70.2(c)).

INTERNATIONAL PRELAMINARY EXAMINATION REPORT

| 1. | Statement | | | N/EQ |
| | Novelty (N) | Claims | 1-13 | YES |
| | | Claims | | NO |
| | Inventive step (IS) | Claims _ | 1-13 | YES |
| | | Claims | | NO |
| | Industrial applicability (IA) | Claims | 1-13 | YES |
| | | Claims | | NO |

2. Citations and explanations

This report makes reference to the following document:
D1: US-B1-6 353 815 (GARCIA HUMBERTO E ET AL) 5 March
2002 (2002-03-05).

Novelty (PCT Article 33(2))

D1 is regarded as the prior art closest to the subject matter of claim 1. It discloses:

a device for monitoring a technical installation comprising several systems (column 10, lines 49-53), characterized by

- at least one analysis module (the workstation in column 10, lines 5-6 corresponds to the analysis module according to the invention) that comprises a dynamic model (column 10, lines 49-53 and column 11, lines 23-24) of at least one of the systems in the technical installation, operating data being suppliable to the analysis model as input data (column 10, lines 60-64 and column 11, lines 8-9), and by
- at least one KI-based algorithm in the analysis module (column 11, lines 48-50), by

INTERNATIONAL PREIS. ANARY EXAMINATION REPORT

means of which algorithm the dynamic model of the system is improved during system operation (column 12, lines 3-11),

output data that characterizes the momentary and/or future operational behavior of the system being determinable by means of the analysis module (column 10, lines 49-53 and lines 60-64).

Therefore, the subject matter of claim 1 differs from the known device in that the KI-based algorithm

- searches in system operating data or in system operating and structural data for dependent relationships among operating data or operating and structural data by means of artificial intelligence methods and in that
- the relationships identified thereby are integrated into the dynamic model as new relationships.

Consequently, the subject matter of claim 1 is novel (PCT Article 33(2)).

Inventive step (PCT Article 33(3))

The problem to be solved by the present invention can therefore be regarded as that of providing an alternative solution for improving the dynamic model of the system during system operation.

The solution to the problem of interest as proposed in claim 1 of the present application involves an inventive step (PCT Article 33(3)) for the following reasons:

The search for dependent relationships in the operating data or in the operating and structural data and the

INTERNATIONAL PRED. ANARY EXAMINATION REPORT

integration of these newly discovered relationships into the dynamic model are neither known from the known prior art nor obvious to a person skilled in the art.

Claims 2-9 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and inventive step.

The subject matter of claim 10 relates to the method implemented by the device in claim 1 and is therefore novel and inventive (PCT Article 33(2) and (3)).

Claims 11-13 are dependent on claim 10 and therefore likewise meet the PCT requirements for novelty and inventive step.
